Analysis Results Sheet

Body Composition Analysis

Analysis results of body composition allow the user to compare the standard range of each parameter. Individualized consultation information makes it possible to track changes in body composition.

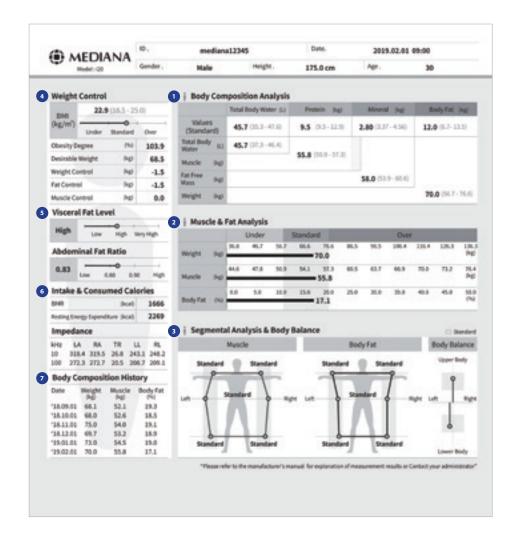

Muscle & Fat Analysis

Helps you see your muscle & fat changes with previously measured data. Helps you see analysis results compared to standard range of muscle & fat mass.

Segmental Analysis & Body Balance

Provides a more localized analysis of segmental muscle, fat mass, and body balance by measuring impedance for each different segment.

Visually outlined consultation outputs system is also useful in comparing results.

Weight Control

Various body composition outputs are given such as Obesity Degree, Desirable Weight and Weight Control, allowing for more personalized test results.

5 Abdominal Fat Analysis

Provides a graphically intuitive analysis of Visceral Fat Level (VFL) and Abdominal Fat Ratio (AFR).

6 Intake & Consumed Calories

Provides research-level analysis of BMR and Resting Energy Expenditure (REE). Expert i20 operators offer professional nutritional guidance based on parameter results sheet.
